

REINVENTING HIGH-SPEED PASSENGER RAIL IN AMERICA

Virgin Trains is setting the model for how high-speed rail should be developed in America - by investing private funds, strategically selecting city pairs, providing an exceptional customer experience and capturing value through transit-oriented development. Proof of concept can be seen in Florida where we currently operate between Miami and West Palm Beach, with an extension to Orlando under construction. Construction of our system connecting Las Vegas and Southern California is targeted to commence in 2020.

HIGH SPEED TRAVEL BETWEEN SOUTHERN CALIFORNIA & LAS VEGAS

- Potential addressable market of 56 million trips
- Enjoyable 75-minute train ride vs. stressful 3-hour drive on congested highways
- Fully-electric, environmentally-friendly trainsets
- Las Vegas station will be close to major resorts, convention, entertainment, and sports venues
- Improved connectivity to housing, employment and business opportunities

VIRGIN TRAINS BY THE NUMBERS

10,000+

Construction jobs created

\$2.13 billion

economic impact to California's economy

4.5 million

cars removed from I-15 annually

600+

permanent jobs created post-construction

300,000 metric tons

of carbon removed annually

811 million

vehicle miles traveled (VMT) removed annually
